

	Prerequisite- Login and go to <a href="https://app.xyte.io/settings/groups?page=1">https://app.xyte.io/settings/groups?page=1</a>	Verify only authorized user can access this screen
	When testing verify clear feedback and error and success messages	
	Verify the following cases on different Browsers: - CHROME ver TBD - FF ver TBD - EDGE ver TBD - IOS - Android - Windows - Screen sizes	
	Functional	
ID	Test Case	More Verifications
1	Verify Group can Create when entering valid input (e.g. New Group, Admins USA (East-west), Admins-EME"A)	Verify group created with default admin (current user as member and ID that can be copy and paste) Verify data stored correctly in DB When refreshing verify data present correctly Verify no console \ network errors
2	Verify group with empty\ duplicated\ invalid (only special chars) cant create	Verify prefix \ postfix spaces removed
3	Verify entering teST-Group & TEst-group not available (same letters)	
4	Verify new group can be searched	
5	Verify in case of updating group with empty\ duplicated\ invalid (only special chars) wont update	
6	Verify ID can be copied and paste	
7	Verify user can Create when entering valid input (e.g. New user, user USA 86436rewisyfksjdh, Admins-EME"A)	See new group expected Verify that the correct permissions and access controls are applied to each user and group
8	Verify user with empty\ duplicated\ invalid (not valid email, only special chars), not existed email, not exist in other organization	
9	Verify same user can add in different group with permission set	Verify that the correct permissions and access controls are applied to each user and group
10	Verify same user cant add to same group	Verify clear feedback and error messages
11	Test removing user	User removed from DB as well
12	Test removing a user from a group that they are not a member of	
13	Test removing multiple users	Users removed, Selected show how many user selected
14	Test searching for user that removed - no results	
15	Test creating a group with a name that is the maximum length allowed by the system	
16	Test creating a user with a username that is the maximum length allowed by the system	
17	Test adding and removing a large number of users to and from a group at the same time	
18		
19		
20	Security:	
21	Verify that data is properly encrypted and protected from unauthorized access	
22	Check protection against vulnerabilities	
23		
24	Performance	
25	Verify system can handle a large number of users and groups without experiencing performance issues	
26	Verify the system function well (load data) when huge amount of users and groups are loaded	Verify pagination of data XX records at a time
27	Verify that the system can handle unexpected user\ group requests - Create or Delete	
28	Usability	
29	Check adding group \ user when network is slow	

30	Check adding group \ user when network is offline
